For the Mid-Cap Value, Small Cap Value, Small Cap Diversified Value and Value Opportunities Funds, investing in small and medium-sized companies involves greater risks than those associated with investing in large company stocks, such as business risk, significant stock price fluctuations and illiquidity. For the Value Opportunities Fund, investing in non-diversified funds means it may concentrate its assets in fewer individual holdings than a diversified fund. Therefore, the Fund is more exposed to individual stock volatility than a diversified fund. The Small Cap and Value Opportunities Funds may invest in ETFs, which are subject to additional risks that do not apply to conventional mutual funds, including the risks that the market price of an ETF's shares may trade at a discount to its net asset value ("NAV"), an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact a Fund's ability to sell its shares. For the High Yield, Capital Income and Value Opportunities Funds, investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments by the Funds in lower-rated and non-rated securities present a greater risk of loss to principal and interest than higher-rated securities. The High Yield, Capital Income and Value Opportunities Funds may invest in derivative securities, which can be volatile and involve various types/degrees of risk. Investments in Asset Backed and Mortgage Backed Securities include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Investments in foreign as well as emerging markets involve additional risk such as greater volatility, political, economic, and currency risks and differences in accounting methods. Some Funds may invest in American Depository Receipts ("ADRs") and Global Depository Receipts ("GDRs") which may be subject to some of the same risks as direct investment in foreign companies. Credit quality ratings are derived from the highest bond rating as determined by S&P, Moody's or Fitch. In limited situations when none of the three rating agencies have issued a formal rating, the Advisor will classify the security as nonrated. Diversification does not assure a profit or protect against loss in a declining market.

The Russell 1000® Value Index measures the performance of those Russell 1000® companies with lower price-to-book ratios and lower forecasted growth values. The Russell 2000® Value Index measures the performance of those Russell 2000® companies with lower price-to-book ratios and lower forecasted growth values. The Russell 3000® Value Index includes stocks from the Russell 3000® Index with lower price-to-book ratios and lower expected growth rates. The Russell Midcap® Value Index measures the performance of those Russell Midcap® companies with lower price-to-book value ratios and lower forecasted growth values. The MSCI World Index is a free float-adjusted weighted index capturing large and mid cap representation across 23 Developed Markets (DM) countries. The index includes reinvestment of dividends, net foreign withholding taxes. The ICE BofAML BB-B US High Yield Constrained Index contains all securities in the ICE BofAML US High Yield Index rated BB+ through B- by S&P (or equivalent as rated by Moody's or Fitch), but caps issuer exposure at 2%. Index constituents are capitalization weighted, based on their current amount outstanding, provided the total allocation to an individual issuer does not exceed 2%. The S&P 500® Index is a broad based unmanaged index of 500 stocks, which is widely recognized as representative of the equity market in general. The ICE BofAML US Corporate, Government & Mortgage Index is a broad-based measure of the total rate of return performance of the US investment grade bond markets. The Index is a capitalization weighted aggregation of outstanding US treasury, agency and supranational, mortgage pass-through, and investment grade corporate bonds meeting specified selection criteria. It is not possible to invest directly in an index.
