

## MARKET COMMENTARY

The S&P 500 Index declined -16.1% in the second quarter and is now down -20.0% year-to-date. Several economic developments in the quarter sparked fears of a recession. Real gross domestic product (GDP) was -1.6% quarter-over-quarter (1Q), the war in Ukraine showed little signs of abating, the Consumer Price Index increased 8.6% year-over-year, and an increasingly hawkish Federal Open Market Committee raised the Fed Funds rate by 125 basis points via two hikes (from 0.5% to 1.75%). The Fed signaled further rate increases going forward to combat the highest inflation level in more than 40 years. The futures market implies that investors expect the Fed Funds rate to exceed 3% by year end with more rate hikes expected in 2023. Higher rates are generally bad for equities. It becomes more costly to borrow, increasing the cost of capital, which is the rate used to discount future cash flows. Higher rates impair long-duration equities disproportionately because most of the intrinsic value is derived from a terminal value estimate far into the future. In general, growth stocks are longer duration securities than value stocks. Unsurprisingly, value has outperformed growth in periods of elevated inflation and interest rates historically.

Value held up better than growth in the quarter. Energy and the three least economically sensitive sectors—consumer staples, utilities, and health care—each declined about -5% in the quarter. These sectors comprise a considerably larger portion of the value index. All other sectors declined -15% or more, with consumer discretionary (-26%), communication services (-21%) and technology (-20%) the worst performers. The Russell 1000 Growth's combined weight in these three sectors averaged more than 73% in the quarter, highlighting the index's unusual concentration the likes of which we have not observed since the tech bubble.

The portfolio's largest sector weights relative to the Russell 1000 Value Index are technology, energy, and financials. Within technology, the portfolio's largest exposure is software. While these stocks are not inexpensive on typical valuation metrics like Price/Earnings, Enterprise Value/Earnings Before Interest and Taxes, Price/Book, etc., they represented fantastic businesses that traded at large discounts to our estimate of intrinsic value. Common traits among our positions are high returns on capital, captive customer bases, good balance sheets, and a substantial return of capital to shareholders. The stocks also trade at large discounts to other parts of the market generally viewed as high quality businesses, e.g., consumer staples, though with attractive growth prospects.

Within energy, valuations remain uncommonly attractive despite the sector's significant outperformance recently, because valuations are coming off such a low base. Higher commodity prices have translated into strong free cash flow. Historically, elevated cash flows in energy were routinely used to reinvest in new exploration projects. Recently, however, cash has been used to pay down considerable amounts of debt, de-risking the sector significantly. Dividends and share repurchases have also ramped up meaningfully. With balance sheets improved and cash flow still strong, we expect share repurchases to increase even further going forward—an accretive use of capital considering the still attractive valuations. Additionally, energy in our view has been the best inflation hedge of all sectors dating back to the 1970s.

At 25%, financials represent the portfolio's largest weight. At just over 11%, banks represent the largest exposure within financials. As a group, the portfolio's banks trade at about 5.5x our estimate of normal earnings, a high teens earnings yield, an attractively valued part of the portfolio. The group trades at 0.6x book value. The attractive valuations reflect the market's recession worries and the credit losses that typically coincide with economic slowdowns. Yet the capital position in the industry is such that even severe regulatory stress tests (most recently in June) are passed largely without comment. Banks may also potentially experience an earnings benefit should interest rates continue to climb—financials have been the best interest rate hedge of all sectors dating back to the 1970s.

The portfolio contains a mix of great businesses with attractive valuations and good businesses with extremely attractive valuations. At 8.7x normal earnings, the portfolio trades below its long-term average (9.0x). This represents a larger-than-normal discount to the index, which trades at a modest premium to its long-term average (15.0x current vs. 13.5x long-term average). Value continues to trade at a large discount to growth, despite its recent outperformance. We view a reversion toward a more normal valuation relationship as more likely than not, which would represent a conducive environment for our long-term fundamental value approach.

## ATTRIBUTION – 2Q22

The Hotchkis & Wiley Diversified Value Fund underperformed the Russell 1000 Value Index in the second quarter of 2022. Stock selection in communication services was the largest detractor from relative performance. Stock selection in energy and consumer discretionary, along with stock selection and the underweight in health care also detracted during the quarter. Conversely, stock selection in financials contributed positively, as did the overweight in energy and underweight in real estate. The largest positive contributors to relative performance in the quarter were FedEx, Berkshire Hathaway, Marathon Oil, Elevance Health (formerly Anthem), and Unilever; the largest detractors were General Electric, Warner Bros. Discovery, General Motors, F5 Inc., and News Corp.

## LARGEST NEW PURCHASES – 2Q22

Boeing Co. is the world's second largest aerospace company, with well-established commercial and defense businesses, developing and producing products for most every type of aircraft, space and defense-electronics platform. In normal times, nearly 80% of Boeing profits are derived from commercial aircraft manufacturing and related businesses. While the Company has been under pressure in recent years due to the grounding of the MAX program and Covid, industry and company-specific conditions are improving. With the Company's shares trading for a third of their pre-pandemic share price, we believe downside risk is limited relative to upside potential as the business improves.

Olin Corp. is the largest global producer of chlor alkali chemicals and chlorine derivatives. Olin was incorporated in 1892 and is headquartered in Virginia. In a healthy GDP scenario, Olin's earnings should remain elevated, particularly with structural changes to chlorine pricing and recent cost-cutting efforts. Olin trades at a significant discount to our assessment of normal earnings, has a strong balance sheet, and the business is diversifying to our existing commodity exposure.

## MANAGER REVIEW & ECONOMIC OUTLOOK

JUNE 30, 2022

Workday is a leader in cloud-based enterprise application software for back-office business functions including human capital management and financials. Back-office software is the least cloud-penetrated category of enterprise applications, which we believe gives Workday a long growth runway. Management believes subscription sales will grow ~20% for many years, which seems reasonable given Workday's <25% penetration in the Global 2000 and <10% penetration in medium

enterprise globally. In addition to a strong growth outlook, Workday's formidable competitive advantages result in impressive unit economics that should support a robust mid-30s EBIT margin at maturity. Despite these quality characteristics, Workday's stock is down 45% YTD and trades for 16x normal EBIT. This is a compelling valuation for a company with premiere franchise potential.

## PERFORMANCE (%) as of June 30, 2022

	QTR	YTD	1 Yr	3 Yr	5 Yr	10 Yr	Since 8/30/04
Diversified Value Fund – I Shares	-14.79	-12.12	-8.27	8.14	7.23	10.97	7.21
Russell 1000 Value	-12.21	-12.86	-6.82	6.87	7.17	10.50	7.79

The "Largest New Purchases" section includes the three largest new security positions during the quarter/year based on the security's quarter/year-end weight adjusted for its relative return contribution; does

not include any security received as a result of a corporate action; if fewer than three new security positions during the quarter/year, all new security positions are included.

**Style Risk:** A value-oriented investment approach involves the risk that value stocks may remain undervalued or may not appreciate in value as anticipated. Value stocks can perform differently from the market as a whole or from other types of stocks and may be out of favor with investors and underperform growth stocks for varying periods of time.

**Market Disruption:** The global coronavirus pandemic has caused disruption in the global economy and extreme fluctuations in global capital and financial markets. H&W is unable to predict the impact caused by coronavirus pandemic, which has the potential to negatively impact the firm's investment strategies and investment opportunities.

The Russell 1000® Value Index measures the performance of those Russell 1000® companies with lower price-to-book ratios and lower forecasted growth values. The Russell 1000® Growth Index measures the performance of those Russell 1000® Index companies with higher price-to-book ratios and higher forecasted growth values. The S&P 500® Index is a broad-based unmanaged index of 500 stocks, which is widely recognized as representative of the equity market in general. The indices do not reflect the payment of transaction costs, fees and expenses associated with an investment in the Fund. The Fund's value disciplines may prevent or restrict investment in major stocks in the benchmark indices. It is not possible to invest directly in an index. Top ten holdings as of 6/30/22 as a % of the Fund's net assets: Citigroup 4.8%, GE 4.7%, Wells Fargo 3.9%, AIG 3.8%, Microsoft 2.9%, Alphabet 2.8%, Oracle 2.8%, Goldman Sachs 2.7%, Elevance Health Inc. 2.7%, and PPL Corp. 2.7%.

Real gross domestic product (GDP) is the inflation adjusted value of the goods and services produced by labor and property located in the US. The Consumer Price Index is a measurement of US prices for household goods and services. Spread is the difference between valuations of value and growth stocks. Basis point is a unit equal to 1/100th of 1% and is used to denote the change in a financial instrument. Cash flow measures the cash generating capability of a company by adding non-cash charges (e.g., depreciation) and interest expense to pretax income. Price/Book is the price of a stock divided by its book value. Enterprise Value/Earnings Before Interest and Taxes is a metric used to determine if a stock is priced too high or too low in relation to similar stocks and the market as a whole. Price/Earnings is the current market price per share divided by normalized earnings per share. Forward P/E (fiscal year) is the projected P/E ratios of the companies invested in the portfolio, which ratios represent current market price per share divided by a company's estimated future earnings-per-share. Projected earnings are consensus analyst forecasts; actual P/E ratios may differ from projected P/E ratios. **A company's forecasted, or estimated, earnings made by analysts or by the company itself. Forward earnings differ from trailing earnings (which is the figure that is quoted more often) in that they are a projection and not a fact.**
