

GLOBAL VALUE

MARKET COMMENTARY

The MSCI World Index increased 8.9% in the first quarter of 2024. The MSCI World Growth Index increased 10.2% while the MSCI World Value Index increased 7.5%. The continued outperformance of growth stocks has resulted in the further widening of value spreads. The MSCI World Value trades at 14x forward P/E (consensus FY1) compared to the MSCI World Growth at 27x.

Global inflation trends show signs of moderation. In the US, the Consumer Price Index (CPI) declined to 3.2% year-over-year, marginally lower than the 3.4% recorded at the close of 2023. Similarly, Eurozone CPI decreased to 2.6%, while the United Kingdom saw a drop to 3.4%. However, key benchmark interest rates worldwide rose modestly in Q1 as expectations for the timing and magnitude of interest rate cuts by the US Federal Reserve have moved further into 2024 on the back of resilient economic data.

GDP in the US remains robust, with the final Q4 2023 estimate standing at 3.4%. In comparison, Japan's Q4 GDP grew by 0.1%, the Eurozone's remained flat at 0.0%, and the United Kingdom experienced a slight decline of -0.3%. While concerns about a global recession have diminished recently, the possibility of a broad economic slowdown remains on the horizon, particularly if inflationary pressures persist.

Today's equity market has drawn a lot of comparisons to that internet bubble period, not only due to elevated valuations but also its high concentration, large valuation disparities, and enthusiasm about revolutionary technology. The comparisons have merit, but the impressive growth, profitability, and free cash flow generation of the market's largest stocks make today's elevated valuations more rational than 25 years ago. The sustainability of this growth/profitability/cash flow, at least in some instances, represents our primary concern. Regardless, once we move away from large cap tech we can find value, including in healthcare and financials.

ATTRIBUTION ANALYSIS – 1Q24

The Global Value portfolio underperformed the MSCI World Index in the first quarter of 2024, although the portfolio outperformed the MSCI World Value Index (gross and net of management fees). Relative to the primary benchmark, stock selection in information technology was the largest detractor. Our position in Ericsson and not owning Nvidia

were key detractors in the quarter. Stock selection in communication services and energy also detracted. Conversely, stock selection in financials was strong during the quarter. Stock selection in consumer discretionary and industrials also helped, as did the underweights in real estate, utilities, and materials.

LARGEST INDIVIDUAL CONTRIBUTORS – 1Q24

General Electric is in the later stages of its long transformation from an underperforming conglomerate into three focused, high quality, industry-leading businesses. Following the spin of its power business (GE Vernova) in early April, what remains is an aerospace that we have long believed to be the "crown jewel" of the company. The stock has done well as management has delivered on its commitment to split the company into three and dramatically improve the underlying performance of each asset.

General Motors is one of the world's largest manufacturers of passenger vehicles. We like General Motors due to its business segments, free cash flow profile, and commitment to return large amounts of cash to shareholders. The stock continued its strong momentum post the UAW strike, driven by 2024 guidance that was materially stronger than consensus and the \$10 billion accelerated share repurchase program.

Hartford Financial Services Group is a leading insurer to US businesses. Their small commercial insurance franchise consistently delivers very strong underwriting margins and is the envy of many in the industry. Their group benefits (life & disability) arm caters to mid and large-sized corporate customers and their employees. Here, the company has the distribution, scale, and claims management capabilities to produce solid and relatively stable profits and cash flows. We believe that Hartford Financial is attractively valued for a company with hard to replicate positions. Performance rose over the period as the company announced solid Q4 '23 results.

GLOBAL VALUE

LARGEST INDIVIDUAL DETRACTORS – 1Q24

Ericsson is a vendor of hardware and software needed to operate wireless networks. This business is effectively an oligopoly, and we believe margins should be better than they have been historically. Ericsson's stock underperformed following weak 2023 results and 2024 outlook. This is a cyclical business, and we believe that the weakness in network operators' capex is temporary, and that network equipment spending will recover to more normalized levels.

International Distributions Services is a holding company with two operating companies facing very different situations. The Royal Mail division is well positioned but is in the process of a turnaround as it manages through severe labor problems. The structurally separate GLS division is stable and growing and is widely estimated to be worth >£4/share, implying >£1B negative value for the Royal Mail business. International Distributions' stock underperformed due to concerns regarding weak parcel volumes in the near term.

Magna International is the fifth largest global auto supplier. Magna has the capability to supply close to two thirds of a vehicle's content, including Auto2.0 technology. Magna reported Q4 earnings that were slightly below expectations in part due to a slowdown in electric vehicle production. As a result, Magna is pushing their 2025 financial targets to 2026. We believe these issues to be transitory.

Net of fee composite performance as of 3/31/24: 29.66%, 11.97%, and 7.88% for 1-, 5-, and 10-year, respectively. Net performance results are presented after management fees and all trading expenses but before custodial fees.

Portfolio characteristics and attribution are based on a representative Global Value portfolio. Attribution is an analysis of the portfolio's return relative to the index, is calculated using daily holdings information and does not reflect management fees and other transaction costs and expenses; interaction effect is combined with stock selection. Returns can differ from certain client portfolio(s) due to data differences, cash flows, trading, and other activity. Specific securities identified are the largest contributors (or detractors) to the portfolio's performance relative to the index. Other securities may have been the best and worst performers on an absolute basis.

The securities reflected herein are intended for illustrative purposes only and not a recommendation to buy or sell specific securities. There is no assurance that the securities discussed will remain in the portfolio or that securities sold have not been repurchased. The securities discussed do not represent the entire portfolio, may only represent a small portion of the portfolio and should not assume the securities discussed were or will be profitable or that recommendations made in the future will be profitable or will equal the performance of the securities discussed. H&W's opinions regarding these securities are subject to change at any time, for any reason, without notice. Certain client portfolio(s) may or may not hold the securities discussed due to each account's guideline restrictions and other relevant considerations.

See www.hwcm.com for full disclaimer.

The MSCI World Index is a free float-adjusted weighted index capturing large and mid cap stocks. The MSCI World Value and MSCI World Growth Indices are free float-adjusted weighted indexes capturing large and mid cap stocks, exhibiting overall value or growth style characteristics, respectively. The MSCI indices represent stocks across 23 Developed Markets (DM) countries and include reinvestment of dividends, net foreign withholding taxes.

Equity securities may have greater risks and price volatility than U.S. Treasuries and bonds, where the price of these securities may decline due to various company, industry and market factors. The strategy invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods.

Style Risk: A value-oriented investment approach involves the risk that value stocks may remain undervalued or may not appreciate in value as anticipated. Value stocks can perform differently from the market as a whole or from other types of stocks and may be out of favor with investors and underperform growth stocks for varying periods of time.
