

LARGE CAP FUNDAMENTAL VALUE

MARKET COMMENTARY

The S&P 500 Index returned +8.7% in the second quarter of 2023 and is now up +16.9% since the beginning of the year. The catalyst of the market's performance this year appears to be the decrease in rates of inflation. The US CPI Index has fallen from its 9.1% peak in mid-2022 to 4.0% and is expected to decline further. Lower inflation and lower interest rates are generally good for equities. This seems to have trumped concerns about an economic slowdown. Bloomberg publishes a *United States Recession Probability Forecast*, which surveys a group of economists on what they think the chances of a recession are in the next 12 months. The index currently stands at 65%. However, equity markets fell in 2022 more than they have risen in 2023, i.e., the S&P 500 is still down over the past year and a half suggesting a slowdown might be priced in already. Also, not all recessions/slowdowns are created equally. Balance sheets of consumers and companies are generally healthy, unlike 2007/2008. Fewer excesses in the financial system are likely to limit the severity of a recession if one occurs.

Performance deviations between value and growth have been stark in recent periods. Large growth outperformed large value in the quarter by 8.7% (+12.8% vs. +4.1%), extending its year-to-date edge to +23.9% (+29.0% vs. +5.1%). Over the past year and a half, however, large value remains ahead of large growth due to its substantial outperformance last year. At the beginning of calendar year 2022, growth traded at a near-record premium to value¹. Value's outperformance in 2022 brought this premium down by year end, but it remained about 1 standard deviation above average. With growth's dramatic outperformance thus far in 2023, its valuation premium has again spiked, and now sits more than 2 standard deviations wider than normal. We do not view this gap as sustainable, and a reversion toward more normal valuation relationships would be significantly favorable to value relative to growth going forward. We view the overall equity market as rather richly valued, though this is driven by growth stocks, not value.

As it stands today, the growth index trades at a large premium to its own history using any common valuation metric and the value index trades reasonably in line with its own history. The portfolio, however, trades at a considerable discount to its past. This is attainable because the portfolio is significantly different than the value index, with an active share above 90. Importantly, however, we do not blindly invest in companies/industries with the lowest price multiples. We invest in those that trade at the largest discounts to intrinsic value, and that intrinsic value is highly dependent on a company's risk profile—lower risk companies have higher intrinsic values all else equal and should command higher fair value multiples. The portfolio's second and third largest sector exposures are healthcare and technology respectively, and our holdings in those sectors epitomize this construct.

Healthcare positions comprise about 13% of the portfolio, which is 4 percentage points higher than at the beginning of the year. The largest increase within the sector has been healthcare providers & services, with Elevance Health the largest individual increase.

Elevance, formerly Anthem, is the second largest health insurer in the US. The company trades at less the 14x normal earnings—a discount to the S&P 500 (21x) and the Russell 1000 Value (15x)—despite having a sticky customer base, faster-than-average growth, and prudent capital allocation. We believe this is the sort of business that should trade at a premium to the market, yet trades at a discount—an attractive opportunity.

Technology comprises just under 13% of the portfolio², slightly less than at the beginning of the year. Even more so than Elevance, we own companies with attractive growth rates, stable customer bases, and healthy returns of capital to shareholders. These should also trade at premium valuations, and after strong performance year-to-date, several do. We trimmed accordingly but maintain meaningful exposure to these excellent businesses.

Financials remain the largest sector weight. The portfolio is well-diversified across banks, capital markets, insurance, and other financial services (e.g., payment processors). Banks remain the largest exposure, and our thesis remains largely unchanged. We are invested in companies with meaningful franchise value and scale/deposit share advantages. This should enable our positions to earn above cost-of-capital returns, yet the stocks prices reflect otherwise. The industry will always face regulatory, interest rate, and behavioral risks, but the industry has managed through various regulatory and interest rate environments with more effectiveness and flexibility than generally understood. While select banks may be at risk during times of financial stress, we view obsolescence risk as exceptionally remote for the industry overall and for our positions specifically.

ATTRIBUTION – 2Q23

The Hotchkis & Wiley Large Cap Fundamental Value portfolio (gross and net of management fees) underperformed the Russell 1000 Value Index in the second quarter of 2023 by a modest margin, though it remains ahead of the benchmark since the beginning of the year. In the quarter, stock selection in communication services detracted from performance. While a couple of media positions declined, the biggest detractor relative to the index was not owning Meta Platforms/Facebook (+36%). As of the June reconstitution, Meta is no longer a part of the Russell 1000 Value, so we would not benefit from a performance reversal. In financials, while we owned some banks that underperformed modestly, not owning large benchmark constituents Berkshire Hathaway and JPMorgan was the larger factor hurting relative performance. Stock selection in technology and healthcare were meaningfully positive, and the underweight positions in consumer staples and utilities also helped. The largest individual detractors to relative performance, excluding benchmark-only names, were Warner Bros. Discovery, NOV Inc., Citizens Financial Group, APA Corp., and Paramount Global; the largest positive contributors were Microsoft, AIG, Oracle, Wells Fargo, and General Electric.

LARGEST NEW PURCHASES – 2Q23

No new purchases.

¹ Based on consensus forward PE (FY2)

² This would be about 14.5% including Alphabet (communication services)

LARGE CAP FUNDAMENTAL VALUE

Net of fee composite performance as of 6/30/23: 15.14%, 8.48% and 10.26% for 1-, 5-, and 10-year, respectively. Net performance results are presented after management fees and all trading expenses but before custodial fees. **Past performance is no guarantee of future results.**

Portfolio characteristics and attribution are based on a representative Large Cap Fundamental Value portfolio. Attribution is an analysis of the portfolio's return relative to the index, is calculated using daily holdings information and does not reflect management fees and other transaction costs and expenses; interaction effect is combined with stock selection. Returns can differ from certain client portfolio(s) due to data differences, cash flows, trading, and other activity. Specific securities identified are the largest contributors (or detractors) to the portfolio's performance relative to the index. Other securities may have been the best and worst performers on an absolute basis.

The value discipline used in managing accounts in the Large Cap Fundamental Value strategy may prevent or limit investment in major stocks in the S&P 500, Russell 1000 Value and Russell 1000 Growth and returns may not be correlated to the indexes. Composite performance is available at www.hwcm.com, located on the strategy's Performance tab along with important disclosures included in the strategy's [GIPS Report](#); quarterly characteristics and portfolio holdings are located on the Portfolio and Literature tabs. For a list showing every holding's contribution to the overall account's performance and portfolio activity for a given time period, contact H&W at hotchkisandwiley@hwcm.com. Equity securities may have greater risks and price volatility than U.S. Treasuries and bonds, where the price of these securities may decline due to various company, industry and market factors. Investing in foreign as well as emerging markets involves additional risk such as greater volatility, political, economic, and currency risks and differences in accounting methods.

Style Risk: A value-oriented investment approach involves the risk that value stocks may remain undervalued or may not appreciate in value as anticipated. Value stocks can perform differently from the market as a whole or from other types of stocks and may be out of favor with investors and underperform growth stocks for varying periods of time.

Market Disruption: The global coronavirus pandemic has caused disruption in the global economy and extreme fluctuations in global capital and financial markets. H&W is unable to predict the impact caused by coronavirus pandemic, which has the potential to negatively impact the firm's investment strategies and investment opportunities.
