

VALUE OPPORTUNITIES

MARKET COMMENTARY

The S&P 500 Index rose 8.6%, closing the second quarter of 2021 at an all-time high. It is up +15.2% since the beginning of the year. While the threat of new COVID variants persists, vaccination levels increased and new cases slowed. Consequently, state and local governments continued to ease closures/restrictions spurring renewed economic activity. Manufacturing rose and labor markets improved, highlighting the potential for tight supply conditions. Consumer prices rose 5% year over year, the fastest level in more than a decade. In response, Fed Chairman Powell reiterated his view that inflationary pressures would be transitory. WTI crude oil touched \$74/barrel, its highest level in more than two years. Corporate earnings continued to show strength, with 86% of S&P 500 companies outperforming consensus expectations.

The Russell 3000 Growth Index outperformed the Russell 3000 Value Index (+11.4% vs. +5.2%) in the second quarter. Even so, the value index has outperformed by more than 11 percentage points over the past 9 months (+37.9% vs. +26.7%). According to data from the Ken French/Dartmouth library, which dates to 1926, the average value-led market¹ has lasted for 33 months and outperformed growth by an average of 55 percentage points. The duration and magnitude of the current rally is far short of that. Nearly all prolonged value-led markets, however, contain stints when growth outperforms value. In perhaps the strongest value rally ever, for example, value outperformed growth by 147 percentage points from March 2000 through December 2006. However, growth outperformed value in nearly one-third of those months (24 out of 82 months). Like that value run, we came from extreme valuation spreads in mid/late 2020 and continue to observe spreads that are considerably wider than average. This gives us confidence that value's advantage should endure until the valuation gap approaches historic levels.

Interest rates fell during the quarter, particularly for long-dated bonds (the yield curve flattened). The 10-year treasury note declined from 1.74% to 1.47% over the quarter. Real estate was the top-performing sector in the S&P 500 as REITs often trade inversely to interest rates, though at 2.5% it entered the quarter as the index's smallest sector. Technology, energy, and communication services were next best, each returning more than +10%. The 8 largest individual contributors for the S&P 500 were all technology-driven companies, though technically 3 of them reside in other sectors (Google and Facebook = communication services; Amazon.com = consumer discretionary; the others were Microsoft, Apple, Nvidia, PayPal, and Adobe). Utilities was the only sector that declined in the quarter, though consumer staples, industrials, and materials also lagged.

As measured by any common valuation metric, the spread between value and growth stocks is wide. So too is the spread between the portfolio and the value benchmark, which means the spread between the portfolio and either the core or growth index is extreme. We believe this bodes well going forward as value relationships normalize. We continue to focus on companies trading at large discounts to intrinsic value but that have strong balance sheets, quality businesses, and employ appropriate corporate governance—a combination that we believe should continue to benefit our clients.

ATTRIBUTION – 2Q21

The Hotchkis & Wiley Value Opportunities portfolio (gross and net of management fees) slightly outperformed the Russell 3000 Value Index in the second quarter. Energy was the largest contributor as both the overweight allocation and positive security selection helped relative performance. Positive security selection in financials, industrials, and consumer staples, along with the lack of exposure to utilities also helped. Security selection in healthcare and communication services, along with overweight exposure to technology detracted from performance. The largest positive contributors to relative performance in the quarter were Range Resources, Microsoft, Wells Fargo, Royal Mail, and Babcock International. The largest detractors were Discovery, F5 Networks, Triple-S Management, Fluor, and Cairn Energy.

LARGEST NEW PURCHASES – 2Q21

Credit Suisse Group presents an attractive valuation following large lapses in its risk management (e.g., exposure to Archegos). We expect that fixing its risk management process is well within its ability and doing so will have manageable cost and time commitments. While the potential for punitive regulatory actions and/or litigation exists, this is more than reflected in the current share price. While recent events are a blemish, the underlying franchise value remains intact; Credit Suisse is a high-quality business that should generate attractive returns on capital over time.

MDC Partners is an advertising agency holding company. The company provides a wide range of services to clients but its focus is creative services. In June 2020, MDC's largest shareholder announced an offer to merge its advertising businesses into MDC. The merger would combine MDC's creative agencies with digital agencies, which should drive faster growth. It is possible that the merger will face opposition from minority shareholders and may not be consummated, but we believe the company is attractive either as a standalone or as a merged company.

(continued)

¹A value-led market is defined as one that outperforms growth by at least 10 percentage points.

VALUE OPPORTUNITIES

Points International provides sponsors of customer loyalty programs such as American Airlines' frequent flyer program a technology platform to manage the purchase and redemption of loyalty points/miles with third parties such as hotels and rental cars. Points enjoys strong relationships with virtually all the major global airlines and has experienced renewal rates over 90%. Its business was significantly impacted by the slowdown in global air travel, which should recover once the pandemic subsides.

Composite performance is available at www.hwcm.com, located on the strategy's Performance tab. Returns discussed can differ from actual portfolio returns due to data differences, cash flows, trading, and other activity. Portfolio characteristics and attribution based on representative Value Opportunities portfolio. Certain client portfolio(s) may or may not hold the securities discussed due to each account's guideline restrictions, cash flow, tax and other relevant considerations. Performance attribution is an analysis of the portfolio's return relative to the index, is calculated using daily holdings information and does not reflect management fees and other transaction costs and expenses. For the portfolio's total performance attribution, interaction effect is combined with stock selection. No assurance is made that any securities identified, or all investment decisions by H&W were or will be profitable.

The value discipline used in managing accounts in the Value Opportunities strategy may prevent or limit investment in major stocks in the Russell 3000 Value, Russell 3000 Growth and S&P 500 and returns may not be correlated to the indexes. Quarterly characteristics and portfolio holdings are available at www.hwcm.com, located on the strategy's Portfolio and Literature tabs. For a list showing every holding's contribution to the overall account's performance and portfolio activity for a given time period, contact H&W at hotchkisandwiley@hwcm.com. Portfolio information is subject to the firm's portfolio holdings disclosure policy.

Style Risk: A value-oriented investment approach involves the risk that value stocks may remain undervalued or may not appreciate in value as anticipated. Value stocks can perform differently from the market as a whole or from other types of stocks and may be out of favor with investors and underperform growth stocks for varying periods of time. Growth investing tends to work well during speculative, momentum-driven markets, while value investing tends to work well following recessionary periods. Past recessions and recoveries cannot predict future performance due to different factors and circumstances.

Market Disruption: The global coronavirus pandemic has caused disruption in the global economy, unprecedented business and travel disruption and extreme fluctuations in global capital and financial markets. H&W is unable to predict the consequences of the upheaval caused by coronavirus pandemic, which has the potential to negatively impact the firm's investment strategies and investment opportunities.
