

MARKET COMMENTARY

The S&P 500 Index returned an impressive +31.5% in 2019. There have been only 16 calendar years since 1926 that have been better. The economy was strong with real GDP modestly positive, inflation range-bound around 2%, and unemployment at a 50-year low. These economic factors proved more consequential to the market than the contentious political environment which included a trade war between the US and China and a vote along party lines in the House of Representatives to impeach the President.

The S&P 500's forward P/E ratio went from 15.4x at the beginning of the year to 19.8x at the end of the year; the 28% multiple expansion explains nearly all of the market's performance. The market's average P/E over the past 30 years is 17.1x, so it went from about 10% below average to about 15% above average over the course of the year. Importantly, however, interest rates are considerably lower than they have been for most of that period—the 10-year treasury yield is just 1.9% compared to its 30-year average of 4.4%. Technology was the top-performing sector by a large margin, returning +50% over the 12 months. Energy was the worst-performing sector for the third year in a row, returning +12%. All other S&P 500 sectors returned between +20% and +33%.

For the third year in a row, the Russell 3000 Growth Index outperformed the Russell 3000 Value Index (+35.8% vs. 26.3%). Growth outperformed value in 7 of the last 10 calendar years with cumulative outperformance of +306% vs. +203%, or +15.0% vs. +11.7% annualized; nearly all of which occurred in the last three years. The lopsided performance has resulted in a wider-than-normal valuation spread between growth and value. Over the past 25 years, the average forward P/E for the Russell 3000 Growth has been 21.1x compared to 15.9x for the Russell 3000 Value, which represents an average valuation spread of 5.2x. As of 12/31/19, the forward P/E for the growth and value indices were 26.6x and 16.9x, respectively, or a spread of 9.7x. This valuation gap has only been wider 7% of the time, all of which came during the tech/internet bubble from 1999 to 2001. Using price-to-book instead of price-to-earnings, the current valuation gap has been exceeded only 3% of the time historically, with the tech/internet bubble again representing the lone exception.

Investors' increasing preference for low stock price volatility explains at least a portion of the valuation gap's widening. The S&P 500 Low Volatility Index is composed of the 100 index stocks that exhibited the lowest volatility in the previous 12 months (i.e. the least volatile quintile of the S&P 500). Over the last decade, the low volatility index's forward P/E averaged about 1.0x multiple points higher than the broad index (18.8x vs. 17.8x). The average premium over the first 8 years was 0.4x multiple points. Over the

last 2 years, the premium gapped out to 3.1x multiple points (the spread as of 12/31/19 was also 3.1x). This has caused a substantial divergence between certain industries whereby many non-cyclicals exhibit rich risk-adjusted valuations relative to their cyclical counterparts. As an example, the forward P/E ratio for S&P 500 Utilities Index has risen by more than 60% over the last decade; the forward P/E ratio for S&P 500 Banks Index has fallen by 5% over the same period. No surprisingly, the portfolio is significantly underweight utilities and staples, given their high valuations.

While the overall equity market appears fully valued compared to history, we believe the valuation disparities across the market create an investment environment highly conducive to long-term focused active management, particularly in relative terms. The spread between the growth and value indices is wide, suggesting a promising outlook for value. The spread between the portfolio and the value index is also wide, suggesting a promising outlook for the portfolio. The portfolio trades at 8.0x normal earnings (historical average of 7.4x) compared to the Russell 3000 Value at 15.3x (historical average of 13.6x) and the Russell 3000 Growth at 26.4x (historical average of 19.2x). The considerable valuation advantage combined with good underlying businesses and healthy balance sheets leaves us confident about the portfolio's prospects.

ATTRIBUTION - 2019

The Hotchkis & Wiley Value Opportunities Fund underperformed the Russell 3000 Value Index in 2019. Over the course of the year, there was an unusually strong correlation between company size and performance, with larger market cap companies outperforming smaller market cap companies. Russell 3000 Value stocks that began the year with a market cap of less than \$5 billion returned +15% over the year while index stocks with a market cap of more than \$100 billion returned +27%. The portfolio's average weight to the smaller group (<\$5 billion) averaged 18% throughout the year compared to 10% for the index; the portfolio's average weight to the larger group (>\$100 billion) averaged 25% throughout the year compared to 37% for the index. The smaller cap bias had a large negative effect on relative performance along with stock selection in consumer discretionary. Fortunately, positive security selection more than offset this brisk stylistic headwind. Positive security selection in industrials and financials were the most meaningful contributors, along with the overweight positions in industrials and technology. The largest positive contributors to relative performance in the year were WestJet Airlines, Microsoft, General Electric, Goldman Sachs, and AIG; the largest detractors were National Oilwell Varco, Tesla put options, Motors Liquidation Trust, Danieli, and Royal Mail.

MANAGER REVIEW & ECONOMIC OUTLOOK

DECEMBER 31, 2019

LARGEST NEW PURCHASES - 2019

Alphabet is the parent of Google, which dominates many of the most important services Internet users rely on. Current valuation is near the market multiple in spite of better growth prospects, an overcapitalized balance sheet, and significant options in better monetizing YouTube, Android, and Cloud services.

Corning is a materials sciences company that sells glass, ceramic, and advanced plastic products through five segments: display glass, specialty materials, telecom, environmental technologies, and life sciences. Corning trades at a modest multiple of current earnings for an outstanding business with what appear to be permanent margin advantages over competition in what should be above-average industries. Additionally, our forecasts and normal earnings include no improvement from several new products that could each drive material earnings growth.

PERFORMANCE (%) as of December 31, 2019

	QTR	YTD	1 Yr	3 Yr	5 Yr	10 Yr	Since 12/31/02
Value Opportunities Fund – I Shares	6.77	25.57	25.57	8.37	8.00	13.72	12.15
Russell 3000 Value	7.48	26.26	26.26	9.32	8.20	11.71	9.37

The performance shown represents past performance. Past performance is no guarantee of future results and current performance may be higher or lower than the performance shown. Investment results and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. The Fund's total annual operating gross expense ratio as of the most current prospectus is 0.96% for I Shares. Expense ratios shown are gross of any fee waivers or expense reimbursements. I Shares sold to a limited group of investors. Periods over one year are average annual total return. Average annual total returns include reinvestment of dividends and capital gains. Expense limitations may have increased the Fund's total return.

You should consider the Fund's investment objectives, risks, and charges and expenses carefully before you invest. This and other important information is contained in the Fund's summary prospectus and prospectus, which can be obtained by calling 1-800-796-5606 or visiting our website at www.hwcm.com. Read carefully before you invest.

The fund is non-diversified and may invest in foreign securities, junk bonds, derivatives, or small/mid cap companies. Please read the fund prospectus for a full list of fund risks.

Investing in value stocks presents the risk that value stocks may fall out of favor with investors and underperform other asset types during a given period. Equities, bonds, and other asset classes have different risk profiles, which should be considered when investing. All investments contain risk and may lose value. Specific securities identified are the largest contributors (or detractors) on a relative basis to the Russell 3000 Value Index. Securities' absolute performance may reflect different results. The Fund may not continue to hold the securities mentioned and

Royal Dutch Shell is a large and diversified integrated oil company. It should see higher earnings power under our view of normal oil prices as they have production growth with capital expenditures below depletion, depreciation, and amortization for the foreseeable future. Its strong position in the growing natural gas industry, coupled with downstream exposure should provide some insulation from oil prices and continue to generate reasonable returns at low crude prices. A meaningful portion of free cash flow should be returned to shareholders via dividends and buybacks. We believe the company trades at an attractive multiple of normal earnings with a high dividend yield and a large planned share repurchase program.

the Advisor has no obligation to disclose purchases or sales of these securities. Attribution is an analysis of the portfolio's return relative to a selected benchmark, is calculated using daily holding information and does not reflect the payment of transaction costs, fees and expenses of the Fund. The "Largest New Purchases" section includes the three largest new security positions during the quarter/year based on the security's quarter/year-end weight adjusted for its relative return contribution; does not include any security received as a result of a corporate action; if fewer than three new security positions during the quarter/year, all new security positions are included.

The Russell 3000® Value Index includes stocks from the Russell 3000® Index with lower price-to-book ratios and lower expected growth rates. The Russell 3000® Growth Index includes companies that display signs of above average growth. The index is used to provide a gauge of the performance of growth stocks in the U.S. The S&P 500® Index is a broad-based unmanaged index of 500 stocks, which is widely recognized as representative of the equity market in general. The S&P 500® Utilities Index comprises those companies included in the S&P 500 that are classified as members of the GICS® (Global Industry Classification Standard) utilities sector. The S&P 500® Banks Index comprises those companies included in the S&P 500 that are classified as members at the industry level of the GICS® financials sector. The indices do not reflect the payment of transaction costs, fees and expenses associated with an investment in the Fund. The Fund's value disciplines may prevent or restrict investment in major stocks in the benchmark indices. It is not possible to invest directly in an index.

Price-to-Earnings (P/E) is calculated by dividing the current price of a stock by the company's trailing 12 months' earnings per share. Price-to-Book is the price of a stock divided by its book value. Top ten holdings as of 12/31/19 as a % of the Fund's net assets: Microsoft Corp. 7.0%, General Electric Co. 6.7%, Wells Fargo & Co. 4.5%, American Int'l Group Inc. 4.1%, Bank of America Corp. 4.0%, Oracle Corp. 4.0%, Seritage Growth Properties 4.0%, Goldman Sachs Group Inc. 4.0%, Morgan Stanley 3.6% and National Oilwell Varco Inc. 3.4%.
