

## MARKET COMMENTARY

The Russell 2000 Index rose +12.7% in the first quarter of 2021. Another round of fiscal stimulus was signed and delivered. The \$1.9 trillion bill raised the total COVID fiscal response to \$5.3 trillion; this sum equates to about 25% of pre-COVID GDP or roughly \$16,000 for every American. The bill's passage was widely anticipated and consequently sparked little reaction from equity markets. The acceleration of vaccine availability prompted investor optimism as it was announced that all Americans 16 and older should be eligible by May 1st. On the economic front, the labor market showed signs of improvement as initial jobless claims fell to the lowest level since the pandemic began. The housing market continued its upward trend and consumer confidence also hit its highest level in a year. WTI crude oil prices rose 22% in the quarter, closing the quarter at \$59/barrel after peaking at \$66 in early March. Corporate America performed well, as more than two-thirds of Russell 2000 companies exceeded consensus earnings expectations during the quarter. The signs of near-term recovery, coupled with the Fed's expanding balance sheet, seemingly point to increased inflation. The gap between the 10-year treasury note and 10-year TIPS, a proxy for expected inflation, finished the quarter at its highest level since mid-2013. In response to increased growth and inflation expectations, interest rates rose with the 10-year treasury yield rising from 0.92% at the beginning of the quarter to 1.74% at its end.

Small cap value stocks outperformed small cap growth stocks for the second consecutive quarter; the Russell 2000 Value Index returned +21.2% while the Russell 2000 Growth Index returned +4.9%. In a trend we believe likely to endure, the continued reopening of the economy and the prospect for higher inflation and interest rates has benefited value stocks relative to growth stocks. Despite value's recent outperformance, the valuation gap between small growth and small value remains considerably wider than historical norms based on any common valuation metric, which highlights the extreme levels reached in 2020.

Price-to-normal earnings is one of our preferred valuation metrics because it adjusts for the peaks and troughs of business cycles. The valuation of our portfolio is approximately 8x normal earnings, which is in line with its long-term average. We would note that our estimate of normal earnings power may prove to be conservative given the massive economic stimulus about to be unleashed over the next few years. The portfolio continues to exhibit somewhat of a cyclical tilt—this is where value

opportunities disproportionately reside—but this is offset by investing in good businesses that are well-capitalized and prudently managed, i.e., companies that can endure cyclical downturns. As we look forward, we believe our clients can continue to benefit from this simple and time-tested combination.

## ATTRIBUTION – 1Q21

The Hotchkis & Wiley Small Cap Value Fund outperformed the Russell 2000 Value Index. Stock selection was particularly beneficial in industrials, utilities, and communication services. The overweight exposure to energy and underweight exposure to real estate also helped. Stock selection in energy and technology detracted from performance, along with the underweight position in consumer discretionary. Not owning GameStop was a detractor of nearly 1 percentage point as the Russell 2000 Value constituent rose more than +900% in the quarter. The largest positive contributors to relative performance in the quarter were Fluor, ODP Corp., News Corp., Range Resources, and AMERCO; the largest detractors were Euronet Worldwide, Allison Transmission, Global Indemnity, Arrow Electronics, and Equitrans Midstream.

Read carefully before you invest.*

*Investing in smaller and/or newer companies involves greater risks than those associated with investing in larger companies. Please read the fund prospectus for a full list of fund risks. Equities, bonds, and other asset classes have different risk profiles, which should be considered when investing. All investments contain risk and may lose value. Attribution is an analysis of the portfolio's return relative to a selected benchmark, is calculated using daily holdings information and does not reflect the payment of transaction costs, fees and expenses of the Fund.*

**Style Risk:** A value-oriented investment approach involves the risk that value stocks may remain undervalued or may not appreciate in value as anticipated. Value stocks can perform differently from the market as a whole or from other types of stocks and may be out of favor with investors and underperform growth stocks for varying periods of time. Growth investing tends to work well during speculative, momentum-driven markets, while value investing tends to work well following recessionary periods. Value stocks following a recession may start from a lower market value than growth stocks which can contribute to their outperformance. Past recessions and recoveries cannot predict future performance due to different factors and circumstances.

**Market Disruption:** The global coronavirus pandemic has caused and continues to cause disruption in the global economy, unprecedented business and travel disruption and extreme fluctuations in global capital and financial markets. H&W is unable to predict the consequences of the upheaval caused by coronavirus pandemic, which, depending on the severity and the length of the outbreak, has the potential to negatively impact the firm's investment strategies and reduce available investment opportunities.
